Friday → 9-11pm  
Saturday → 12-2pm  
Sunday → 12-2pm

- > understand the prob
- i/p values
- Approach

2/Feb/23

Lect - 1

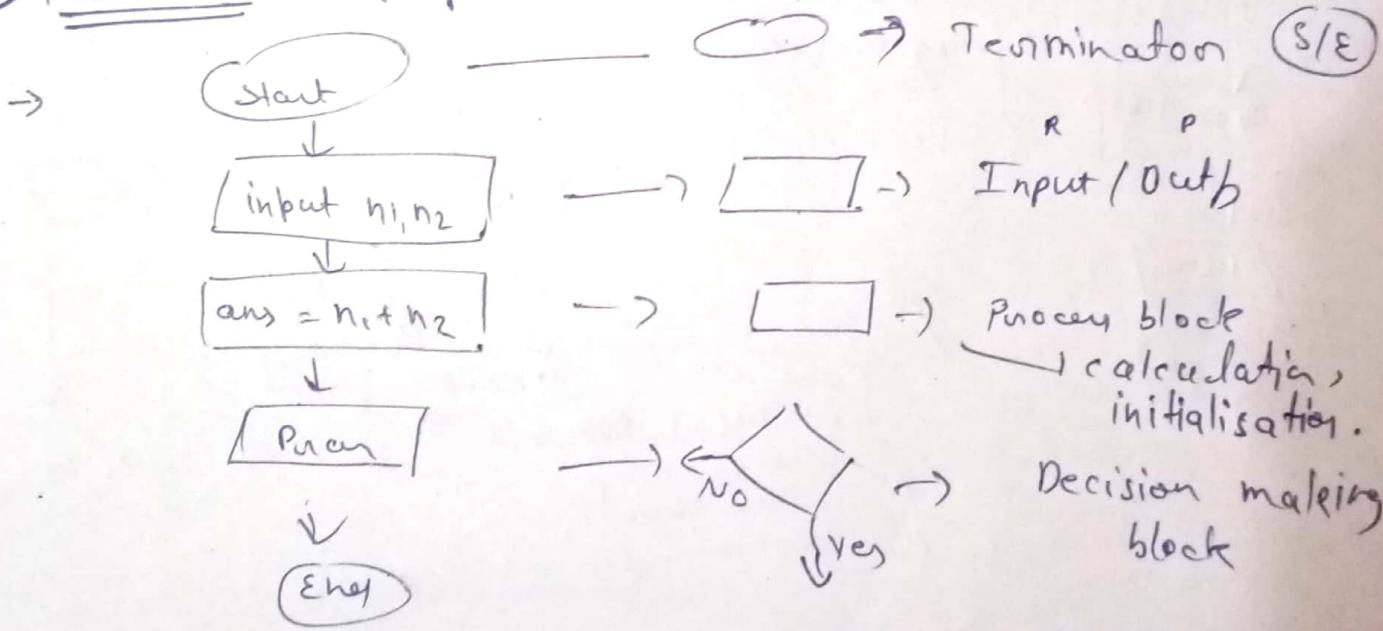

Fundamental of Alg.

~~Par~~

~~Point sum of 2m~~

Flowchart - graphical form

Pseudo Code :- generic way  
represent your code in  
text form

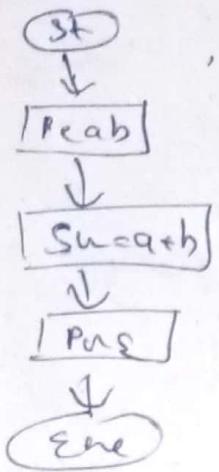

read a & b  
 $sum = a+b$   
print sum

read a & b  
 $diff = a-b$   
print diff

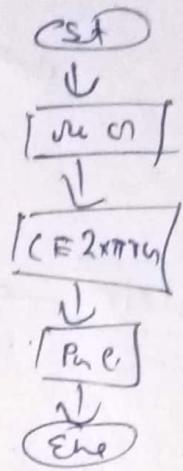

A → connection (SR Hb)

start  
read a & b  
 $avg = \frac{a+b}{2}$   
print avg  
exit

Add 2 no by taking input  $\Rightarrow$  final output of c/c++

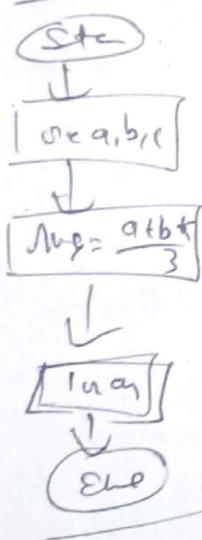

Start  
read  
 $Sum = a + b$   
print

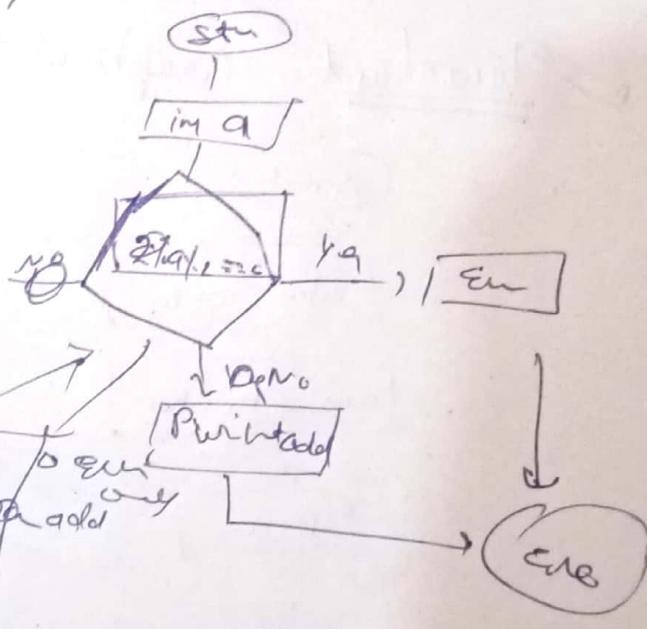

Input  
Sum  
 $c = 23$   
Print

$\Rightarrow$  Avg of 3 no

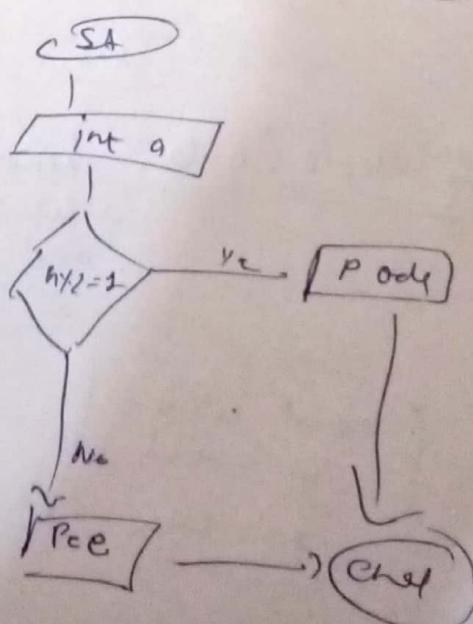

Read a, b, c  
 $Avg = \frac{a+b+c}{3}$   
Print avg

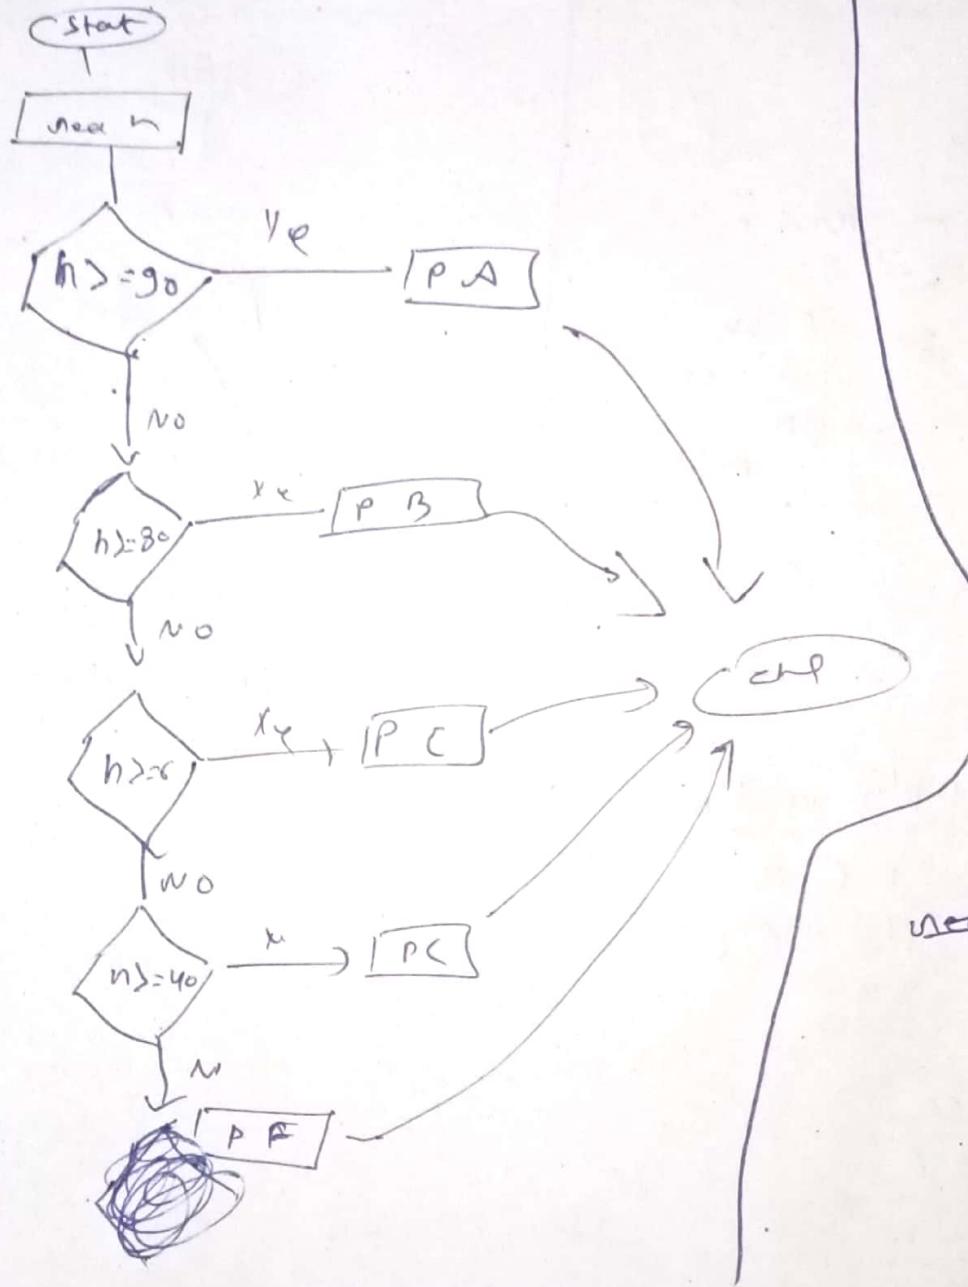

$\Rightarrow$  check no. even or odd

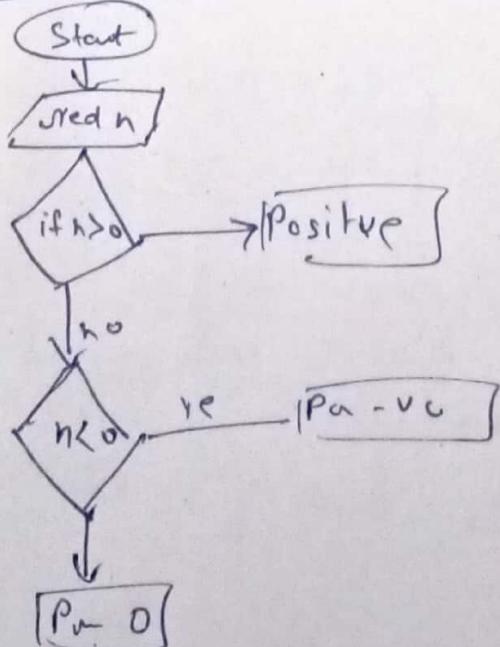

even  
if  $h \% 2 = 1$ , odd  
else even  
print even

$\Rightarrow$  student & marks flowchart

$\Rightarrow$  check no. is true or not 0

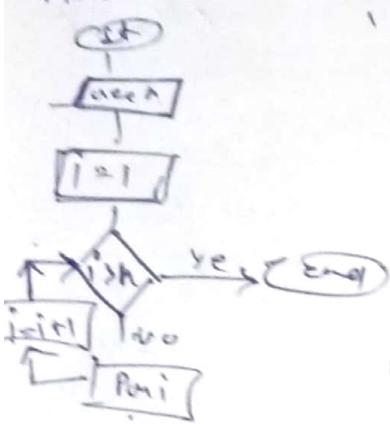

read n  
 if  $n > 0$   $\rightarrow$   $Pn +$   
 else if  $n < 0$   $\rightarrow$   $Pn -$   
 else  $\rightarrow$   $Pn = 0$

## Print 1 to N

$n=5$

1, 2, 3, 4, 5  
out

Flow

- 1 → read n
- 2 →  $i=1$
- 3 → if  $i > n$
- 4 → exit
- Point i
- $i = i + 1$
- go to step ③

## Add n numbers

start

read n

$i=1, sum=0$

$i < n$

$sum = sum + i$

$i = i + 1$

loop

Print sum

1 → read n

2 →  $i=1$

3 →  $sum=0$

4 → if  $i > n$

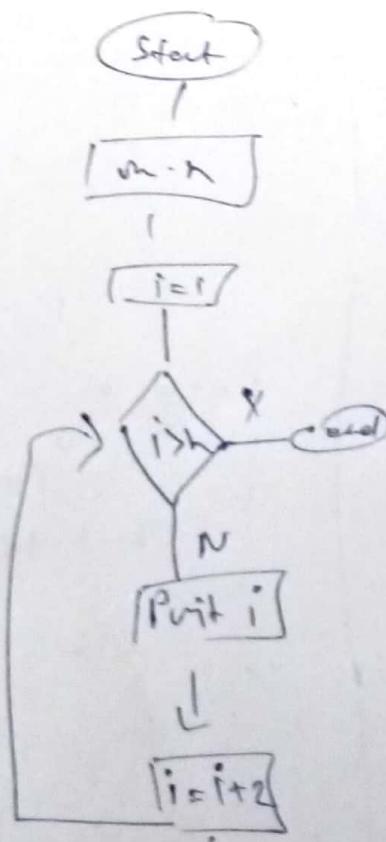

else

cl 4

## Print 1 to N only odd no.

$n=5$

1, 3, 5  
out

new no

$sum = sum + i$

$i = i + 1$

loop

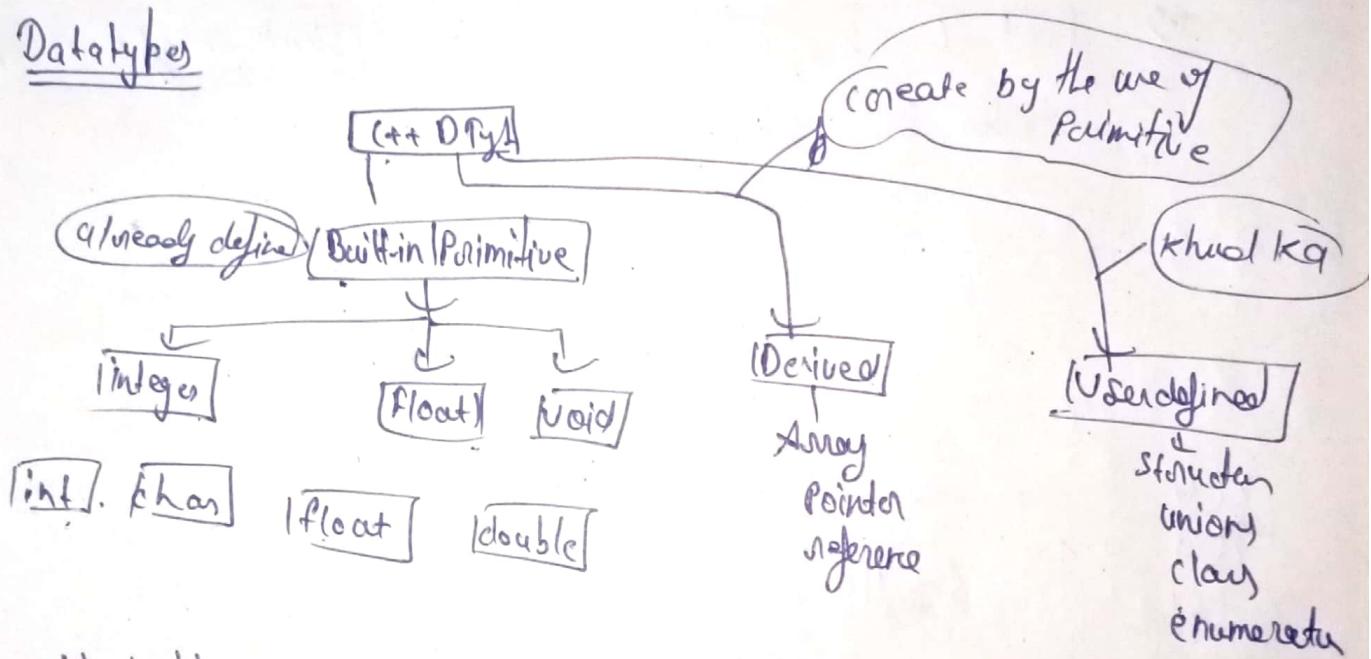

```
#include<iostream>
using namespace std;
int main()
{
```

```
    cout <<
    cin >>
```

```
<< endl;
```

}

## Data types

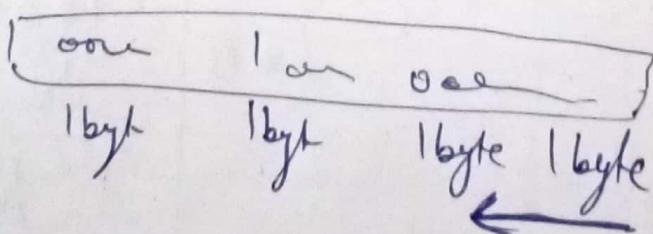

## Variable

a = 1, b = 10, etc.

init

## Q.3 Patterns I (HD)

①

```
* * * * *
* * * *
* * * *
```

for (int row = 0; row < 3; row = row + 1)

{

{ for (int col = 0; col < 5; col = col + 1)

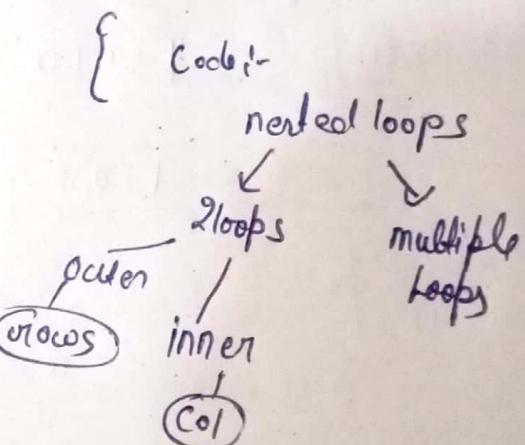

{  
} cout << "\* ";

cout << endl;

}

↓ diagram

```
* * * * *
* * * * *
* * * * *
```

① Row - observation  
total no. = 3

② Col - observation

Col 0 - 3\*

Col 1 - 3\*

Col 2 - 3\*

Col 3 - 3\*

Col 4 - 3\*

② \* \* \* \*      Solid Square Pattern

```
* * * *
* * * *
* * * *
* * * *
```

```
for (int row=0; row<5; row++)
{
    for (int col=0; col<5; col++)
    {
        cout << "*";
    }
    cout << endl;
}
```

→ int n;  
→ cin >> n;

### ③ Hollow Rectangle

```
for (int row=0; row<3; row++)
{
    for (int col=0; col<5; col++)
    {
    }
```

```
row0 * * * *
row1 *
row2 * * * *
```

```
for (int row=0; row<8; row++)
{
    if (row==0 || row==2)
    {
        for (int col=0; col<5; col++)
        {
            cout << "*";
        }
    }
    else
    {
        cout << "*";
        for (int i=0; i<3; i++)
    }
```

## ④ Half Pyramid →

```
for (int row=0; row<5; row++)
```

```
{  
    for (int col=0; col<row+1; col+1)  
    {  
        cout << "*";  
    }  
    cout << endl;  
}
```

```
*****  
* * * *  
* * * * *  
* * * * * *  
* * * * * * *
```

H

## ⑤ Inverted Half Pyramid →

```
int n;  
cin >> n;
```

```
for (int r=0; r<n; r++)  
{  
    for (int col=0; col<n-r-1; col++)  
    {  
        cout << " ";  
    }  
    cout << endl;  
}
```

```
*****  
* * * *  
* * * *  
* * * *  
* * * *  
*
```

## ⑥ Numeric Half Pyramid →

```
int n;  
cin >> n;
```

```
for (int r=0; r<n; r++)  
{  
    for (int col=0; col<r+1; col++)  
    {  
        cout << col+1;  
    }  
    cout << endl;  
}
```

```
1  
1 2  
1 2 3  
1 2 3 4  
1 2 3 4 5
```

### ④ Inverted Half Numeric Pyramid.

```
for (int i=0; i<n; i++)  
{  
    for (int col=0; col < n-i; col++)  
    {  
        cout << col+1;  
    }  
    cout << endl;  
}
```

1	2	3	4	5
1	2	3	4	
1	2	3		
1	2			
1				

### ⑤ Full pyramid

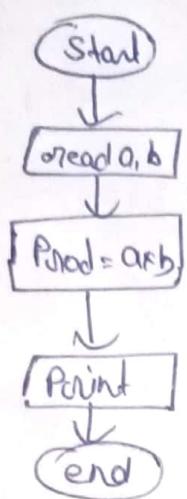

```
*  
* *  
* * *  
* * * *
```

⇒ Namespace → used to avoid collision. \*

⇒ Ternary operator.

# Assignment

① Multiply by 2 numbers.

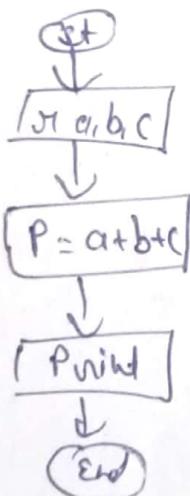

read a,b

$$\text{product} = a \times b$$

Print product

② Perimeter of  $\triangle$

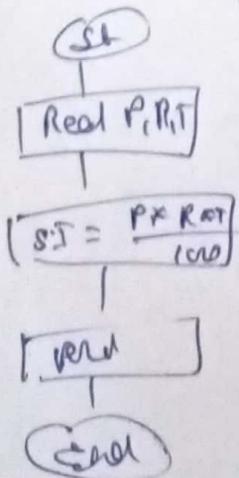

read a,b,c

$$P = a + b + c$$

Print

③ Find Simple interest

$$S.I = \frac{P \times R \times T}{100}$$

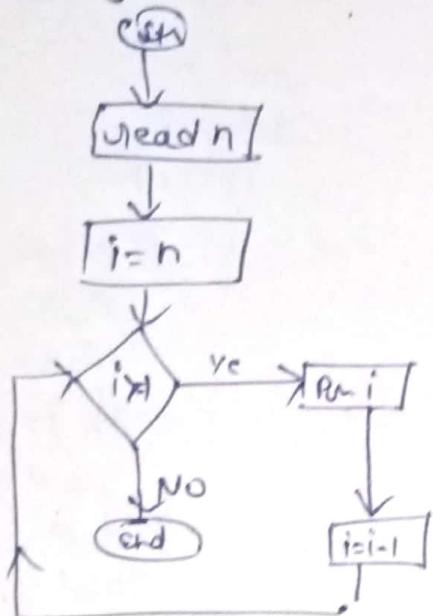

read P, R, T

$$S.I = \frac{P \times R \times T}{100}$$

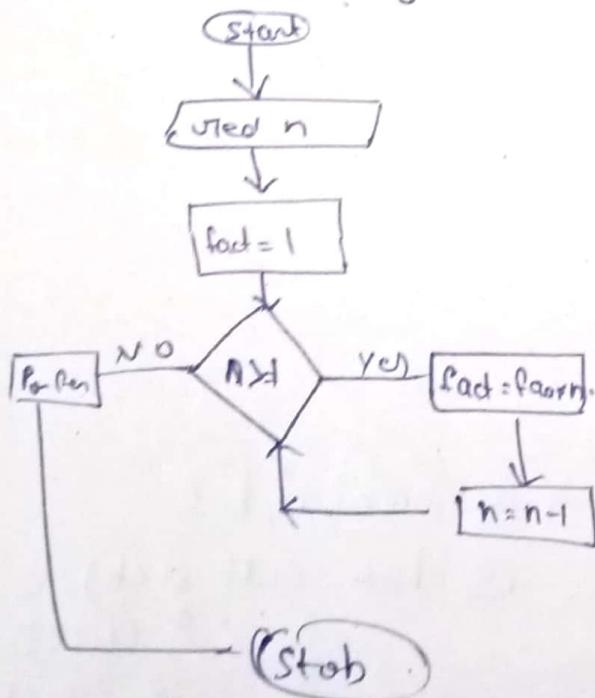

Print S.I

#### ④ counting from N to 1

1. read  $N$   
 2. set  $i = N$   
 3. if  $i \geq 1$   
     Print  $i$   
      $i = i - 1$   
     loop to 3  
 4. else stop

#### ⑤ Find factorial of a number.

① Read  $n$

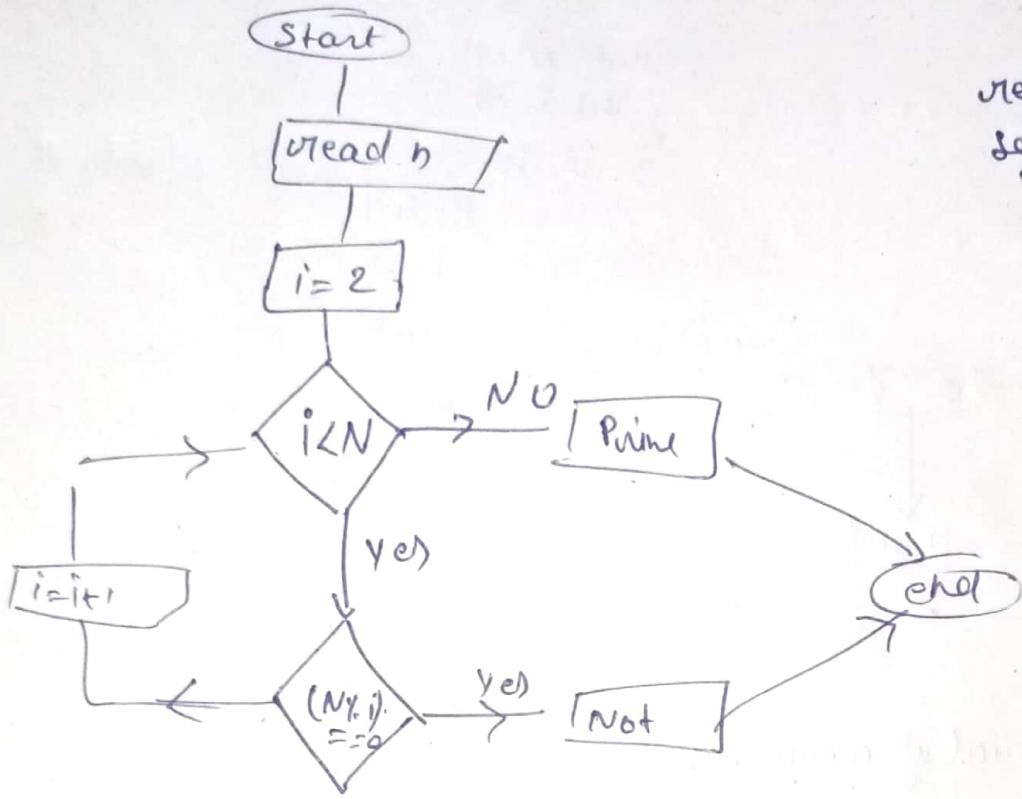

②  $fact = 1$

③ if  $n \geq 1$

$fact = fact * n$   
 $n = n - 1$   
 (not 3)

Print  $fact$

⑥ Check a number is Prime or not.

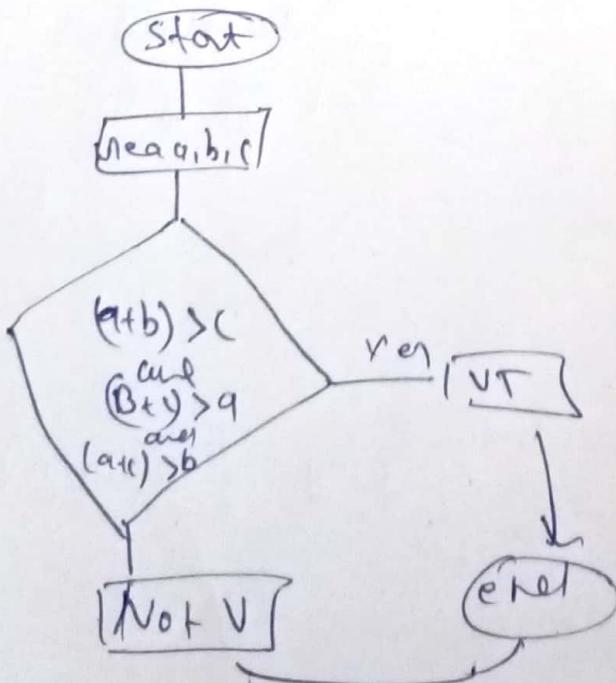

read n  
 set  $i=2$   
 if  $i < n$   
 if  $N \% i = 0$   
 then not prime  
 else prime  
 $i = i + 1$   
 until  $i = n$   
 print prime  
 end

⑦ Check given triangle is valid or not

$$(a+b) > c \Leftrightarrow$$

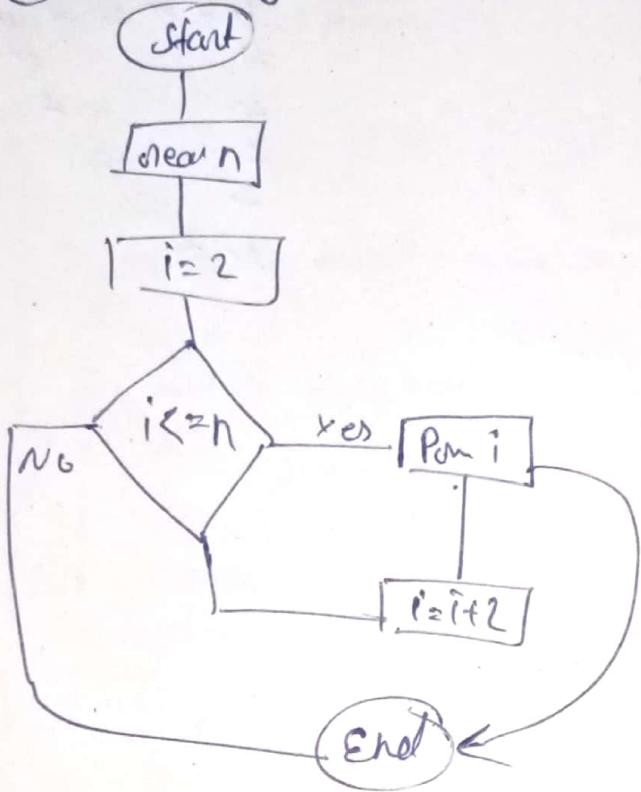

$$(b+c) > a \Leftrightarrow$$

$$(a+c) > b \Leftrightarrow$$

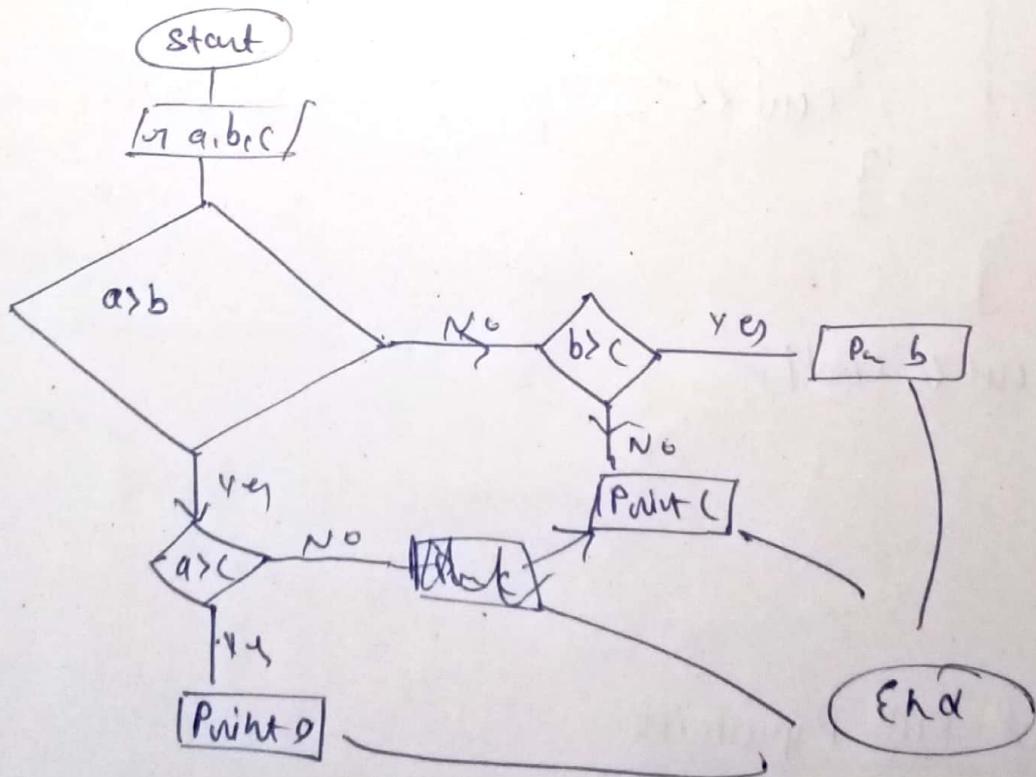

- ① read a, b, c
- ② check cond  $(a+b) > c$   
 $\wedge (b+c) > a$   
 $\wedge (a+c) > b$
- ③ print val  
 if not ②
- ④ else

⑧ Point only even number from 1 to  $n$

① read  $n$   
 ② set  $i = 2$   
 ③ if  $i \leq n$   
     Print  $i$   
      $i = i + 2$   
     go to 3  
 ④ ~~Print end~~

⑨ Point maximum of three numbers

① user a, b, c

② if  $a > b$

A.  $a > c$

    APrint a

B. Print c

else  
    if  $b > c$   
        Print c  
    else  
        Print c

→ Solid Square Pattern  
→ Hollow inverted Half Pyramid

```
int main()
{
    int n;
    cin >> n;
    for (int i=0; i<n; i++)
    {
        for (int j=0; j<n; j++)
        {
            if (i==0 || j==0 || j==n-i-1)
            {
                cout << "*";
            }
            else
            {
                cout << "_";
            }
        }
        cout << endl;
    }
}
```

```
*****
 * *
 * *
 * *
 * *
```

→ Hollow & Full Pyramid

## ~~Full~~ Full Pyramid

```
int main()
{
    int n;
    cin >> n;
    for (int row = 0; row < n; row++)
    {
        // Space
        for (int col = 0; col < n - row - 1; col = col + 1)
        {
            cout << " ";
        }
        // Stars
        for (int col = 0; col < row + 1; col = col + 1)
        {
            cout << "* ";
        }
        cout << endl;
    }
}
```

( $n - (row + 1)$ )

## Inverted Full pyramid

```
int n;
cin >> n;
for (int row = 0; row < n; row++)
{
    // Space
    for (int col = 0; col < row; col++)
    {
        cout << " ";
    }
    // Star
    for (int col = 0; col < n - row; col++)
    {
        cout << "* ";
    }
    cout << endl;
}
```

## Solid Diamond

Full + Revem

## Hollow Diamond

```
int n;
cin >> n;
for (int row = 0; row < n; row = row + 1)
{
    // space
    for (int col = 0; col < n - row - 1; col++)
    {
        cout << " ";
    }
}

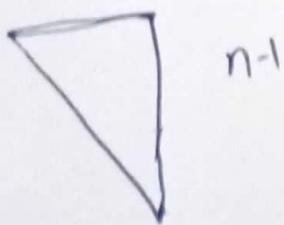

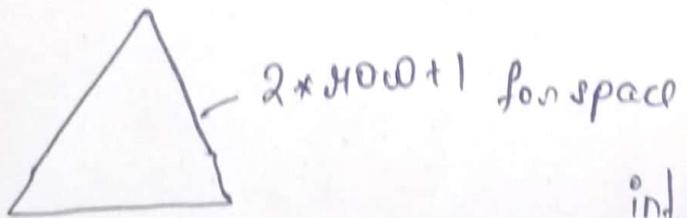

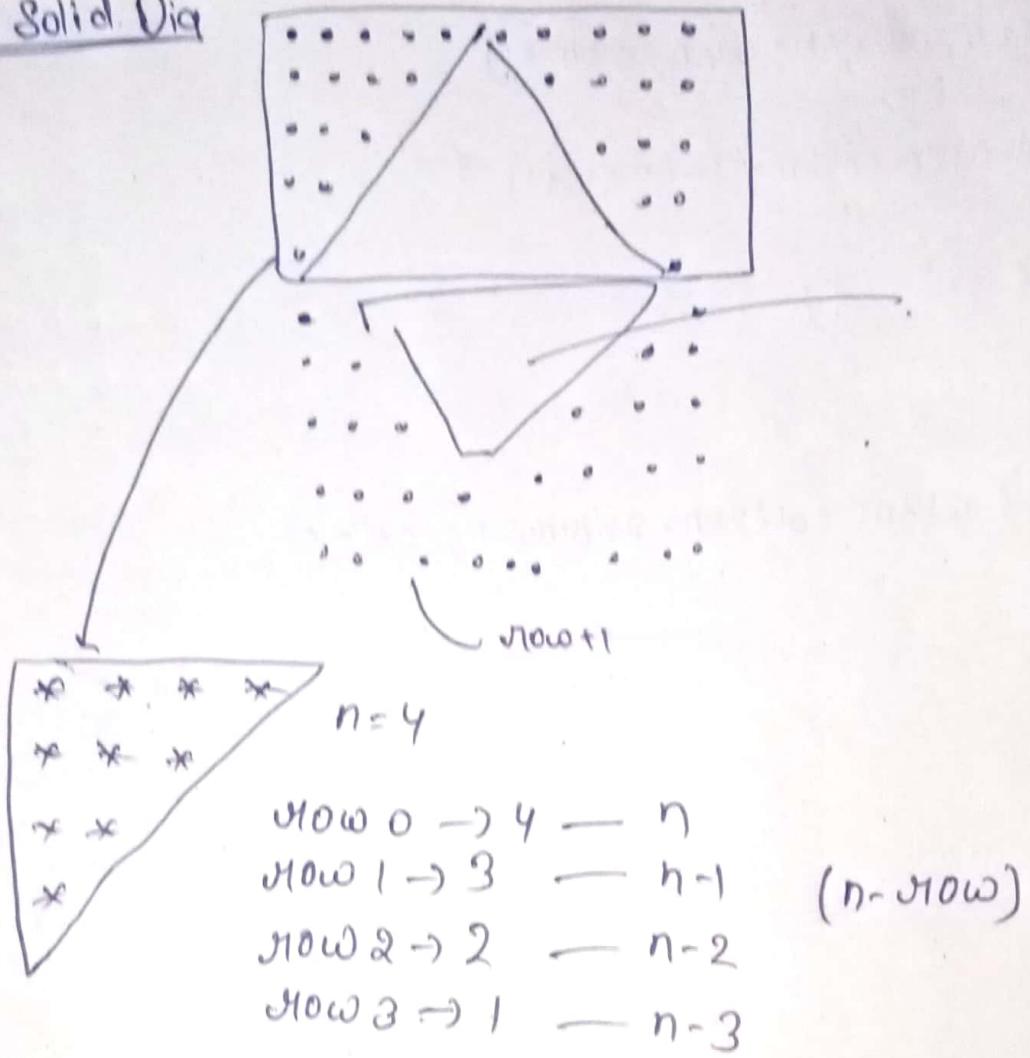

// star
for (int col = 0; col < 2 * n - 1; col++)
{
    if (col == 0)
    {
        cout << "* - ";
    }
    else if (col == 2 * n)
    {
        cout << "* ";
    }
    else
    {
        cout << "- ";
    }
}
cout << endl;
```

```
for (int row = 0; row < n; row++)  
{  
    for (int col = 0; col < row; col = col + 1) - show  
    {  
        cout << " ";  
    }  
}
```

11.5h

```
for (int col = 0; col < 2 * n - 2 * (row + 1); col++)  
{
```

## Flipped Solid Dia

for (int int = 0; growth < n; int++)

{ // half

for (int col = 0; col < n - MOW; col++)

{ cout << "x";

}

// space wall

```
for (int col=0; col<2*nrow+1; col++)
```

```
{
```

```
    cout << "-";
```

```
}
```

```
// half pun
```

```
for (int col=0; col<n-nrow; col++)
```

$$\boxed{111111 - 11011}$$

आगामी संख्या पर हम  
वह Right shift  $\Rightarrow$  रखते हैं  
जो कि अचूक मान +ve वा  
-ve हो सकते हैं।

$$\boxed{011101 - 101}$$

$\leftarrow$  हम  $\rightarrow$  हम

## \* Pre/Post $\rightarrow$ Increment / Decrement Operation

### Pure Increment

int a = 5  
 $\boxed{++a \rightarrow a = 6}$   
 cout << ++a;  $\rightarrow \textcircled{6}$

### Post Incr

int a = 5  
 cout << a++;  $\rightarrow \textcircled{5}$   
 a = 6

### Pure decrement

int a = 5  
 cout << a--;  $\rightarrow \textcircled{4}$

### Post decr

int a = 5  
 cout << a--;  $\rightarrow \textcircled{5}$   
 cout << a;  $\rightarrow \textcircled{4}$

int a = 5;  
 cout << (++a) \* (++a);

## \* Break & Continue keyword

Break

for (int i=0; i<n; i++)

{

cout << "Babbar";  
 break;

O/P

Babbar  
 Love

cout << "Love";

Continue

for (int i=0; i<5; i++)  
 {  
 continue;  
 cout << i;

O/P

Nothing (empty)

\* for skip any iteration

for (---)

↓↓↓↓ if ( $i=2$ )  
 cont.

$i=0$   
 $i=1$   
 $i=2$

## \* Variable Scoping

```
int main()
{
    int a;
    int b=5;
    b = 10;
    if (true) {
        cout << b << endl;
    }
    cout << b << endl;
```

(Local Variable)

→ self modification  
for better understanding -

## \* Operator Precedence

→ Use brackets for best practice.

## \* Switch Case

```
switch (exp)
{
    case 1: _____
        break;
    case 2: _____
        break;
    _____
    default: _____
}
```

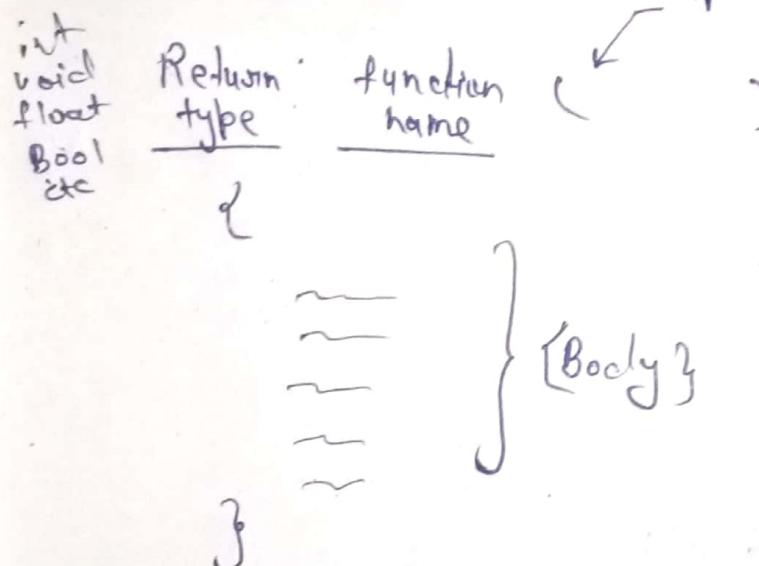

```
int val;
cout << "Enter the value " << endl;
in >> Val;
switch (val) {
    case 1: cout << "Love";
        break;
    case 2: cout << "Babba";
        break;
    case 3: cout << "Ramesh";
        break;
    default: cout << "Hello";
}
```

L-6

## Functions & Some Problems

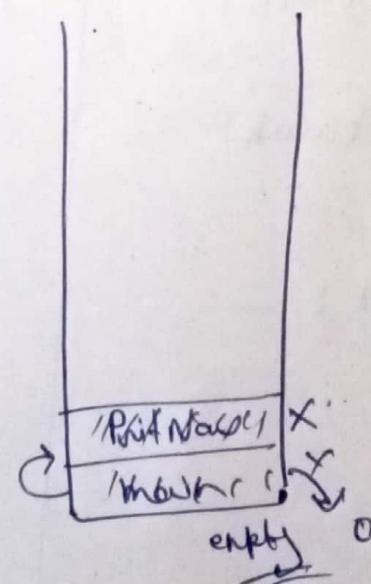

- ⇒ ~~like~~ linked with a well-defined task.
- ⇒ Benefits re-use same code again & again.
- ⇒ Avoid lengthy or Bulky code, Readability.

### Syntax

### \* Function call stack

- function call
- kis function M  
dene function K O  
call karne hai
- function K kon kon se  
local variable h
- function Kya return  
kra hai

Ques write a function to add 2 numbers.

```
⇒ int main()
{
    int a; ③
    cin >> a;
    int b; ④
    cin >> b;
    int sum = add(a, b); ⑤
    cout << "Result" << sum << endl;
    return 0; ⑥
}
```

```
int add(int a, int b)
{
    int result = a + b;
    return result; ⑦
}
```

\* agar hum log function ko main ke niche likh de to humko us function ko main se phle declare karne hote hai.

```
int add(int x, int y);
```

Ques Find max of 3 numbers.

```
int a, b, c;
cin >> a >> b >> c;
int maxnumber = findMax(a, b, c);
cout << maxnumber << endl;
```

```
int findMax(int num1,
            int num2, int num3)
{
    if (num1 > num2 && num1 > num3)
    {
        return num1;
    }
    else if (
        num2 > num1 && num2 > num3
    )

    }
    else
    {
        return num3;
    }
}
```

Ques Counting 1 to n

$\Rightarrow \{$

```

int n;
cout << "Enter value" << endl;
cin >> n;
PointCounting(n);
return 0;
}

```

$\xrightarrow{\text{+n Actual Value}}$

Ques void pointCounting ( int n )

```

{
    for ( int i = 1; i <= n; i++ )
    {
        cout << i << "-";
    }
    cout << endl;
}

```

Ques Write a function for student marks Problem.

$\Rightarrow \text{int main}()$

```

{
    int mark;
    cout << "Mark" << endl;
    cin >> marks;
    char finalGrade = getGrade(marks);
    cout << finalGrade << endl;
    return 0;
}

```

$\xrightarrow{\text{+n Actual Value}}$

char getGrade ( int m )

```

{
    if ( m >= 90 )
        return 'A';
    else if ( m >= 80 )
        return 'B';
    else if ( m >= 70 )
        return 'C';
    else if ( m >= 60 )
        return 'D';
    else
        return 'E';
}

```

Ques sum of even no. upto N

```

int n;
cin >> n;
int ans = getSum(n);
cout << "Sum of N" << n << " is " << ans << endl;
return 0;
}

```

$\xrightarrow{\text{+n Actual Value}}$

int getSum ( int n )

```

{
    int sum = 0;
    for ( int i = 0; i <= n; i++ )
    {
        sum = sum + i;
    }
    return sum;
}

```

```

int getEvenSum (int n)
{
    int sum = 0;
    for (int i=2; i<=n; i+2)
    {
        sum = sum + i;
    }
    return sum;
}

```

$$a \otimes b = \begin{cases} a+b & a \leq b \\ a & a > b \end{cases}$$

## Homework

## Function

- ① W.A.F to display area of circle. —  $\pi r^2$
- ② Find Number is Even or Odd.
- ③ Find Factorial of a number. — i/p  $\rightarrow$  n (1-1)
- ④ Check Number is prime or not. — i/p  $\rightarrow$  n
- ⑤ Print all prime numbers from 1 to N.

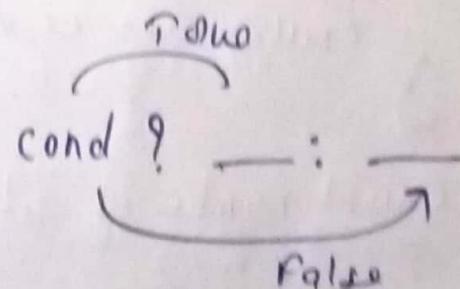

1 → N

## \* Conditional / Ternary Operator

```

if( age >= 18 )
    cout << "Can Vote";
else
    cout << "Cannot Vote";

```

$\downarrow$   
 cout << age;  
 string str = age >= 18 ? "Vote"; Not;  
 cout << str

④  $n = 234$   
 $\downarrow$   
432  
{ int n = 234;  
while (n != 0)  
{  
int rem = n % 10;  
cout << rem << " ";  
n = n / 10;  
}  
cout << 0;  
}

```
int n = 534;
for (; n != 0; n = n / 10)
{
    int rem = n % 10;
    cout << rem << " ";
}
cout << 0;
```

\* ~~528~~ → 5, 2, 8

⑤ 

8	2	1	3	7
---	---	---	---	---

 → 8237  
dig0 dig1 dig2 dig3

```
int digits = {8, 2, 3, 7};
```

```
int ans = 0;
```

```
for (int i = 0; i < 4; i++)
```

{

```
    ans = ans * 10 + digits[i];
```

}

```
cout << ans << endl;
```

}

\* Count number of set bits  
n=3

000000	00000	000000
--------	-------	--------

No. of set bits - 2

000000      1  
                |  
                |  
                |

>> 000001

→

000001  
& 1  
-----  
000001  
step

\* int n=3;  
int ans=0;  
while (n!=0)  
{  
    if (n>1)  
        {  
            ans++;  
        }  
    n = n>>1;  
}  
cout<<ans << endl;

In-3  
DIP → 2

④ int km;  
cin >> km;  
cout << "Value in miles is" << (1/1.6)\*km << endl;

## Number System - Binary to Decimal

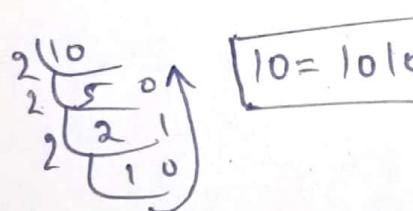

### Decimal System :-

- The decimal number system has base 10.
- It uses digit from 0 to 9.
- Base: it is the number of symbols (digit) a number system uses.

### Binary System :-

- Number system using base 2.
- It uses only two digits 0 and 1.

### \* Decimal to Binary :-

$$10 \rightarrow (1010)_2$$

In code —

```

int decimalToBinary (int n)
{
    int binano = 0;
    int i = 0;

    while (n > 0)
    {
        int bit = n % 2;           → (n%2)
        cout << bit << endl;      → binano = bit * pow
        n = n / 2;                → (10, i) + binano;
        i++;                      → next binary number
    }
}

int main()
{
    int n;
    cin >> n;
    int binary = decimalToBinary (n); - cout
}

```

ans = (digit \* 10<sup>i</sup>) + ans

{bits / stdc++.h}

- ①  $0 * 10^0 + 0 = 0$
- ②  $1 * 10^1 + 0 = 10$
- ③  $0 * 10^2 + 10 = 10$
- ④  $1 * 10^3 + 10 = 1010$

alternative

$$n = 10$$

$$n \& 1$$

$$\begin{array}{r} 1010 \\ 0001 \\ \hline 0000 \end{array}$$

$$-\textcircled{0} - \text{first bit}$$

>>

$$101$$

$$001$$

$$\begin{array}{r} 001 \\ \hline 001 \end{array} - \textcircled{0} - \text{second bit}$$

>>

$$10$$

$$01$$

$$\begin{array}{r} 01 \\ \hline 00 \end{array} - \textcircled{0} - \text{third bit}$$

>>

$$1$$

$$\begin{array}{r} 1 \\ \hline 1 \end{array} - \textcircled{1} - \text{fourth bit}$$

## \* Binary to Decimal :-

123

$$100 \rightarrow 1 \times 10^2$$

$$10 \rightarrow (1010)_2$$

$$\begin{array}{r} 1010 \\ -010 \\ \hline 010 \end{array}$$

1 0 1 0

$$1 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 0 \times 2^0$$

$$\boxed{8 + 0 + 2 + 0 = 10}$$

$$\text{formula} \Rightarrow \text{digit} * (\text{Base})^i$$

In code —

```
int binarytoDecimal (int n)
{
    int decimal = 0;
    int i = 0;
    while (n)
    {
        int bit = (n % 10);
        decimal = decimal + bit * Pow(2, i++);

        n = n / 10;
    }
    return decimal;
}

int main()
{
    int binaryno;
    cin >> bno;
    cout << binarytoDecimal (bno) << endl;
}
```

claym 1010

$$\text{dec} = 0 + 0 * 2^0 = 0$$

n = 101

bit = 1

$$\text{dec} = 0 + 1 * 2^1 = 2$$

n = 10

bit = 0

$$\text{dec} = 2 + 0 * 2^2 = 2$$

n = 1

$$\text{dec} = 2 + 1 * 2^3 = 10$$

↳ Explain

by using bitwise

$n = 10$

$\text{binaynu} = 0$   
 $i = 0$

$\text{bit} = 0$

$$\text{binaynu} = 0 * \text{pow}(10, 0) + 0 = 0$$

$n \gg 1$

$\text{bit} = 1$

$$\text{binayn} = 1 * 10^1 + 0 = 10$$

$n \gg$

$\text{bit} = 0$

$$\text{binayn} = 0 * 10^2 + 10 = 10$$

$n \gg$

$\text{bit} = 1$

$$\text{binayn} = 1 * 10^3 + 10 = \boxed{1010} \rightarrow$$

$n = 1010$

$\text{bit} = 0$

$$\text{der} = 0 + 0 * \cancel{2^0} = 0$$

~~$n = 1010$~~

$\text{bit} = 1$

~~$$\text{der} = 0 + 2 * 10^1 = 10$$~~

~~$n = 10$~~

~~$\text{bit} = 0$~~

$$\begin{array}{r} 1010 \\ \underline{\quad\quad\quad} \\ 0000 - 0 \end{array}$$

$$\begin{array}{r} 10 \\ \underline{\quad\quad\quad} \\ 001 - 1 \end{array}$$

$$\begin{array}{r} 10 \\ \underline{\quad\quad\quad} \\ 00 - 0 \end{array}$$

$$\begin{array}{r} 10 \\ \underline{\quad\quad\quad} \\ 1000 \\ \underline{\quad\quad\quad} \\ 10 \end{array}$$

$$\begin{array}{r} 1010 \\ 2 \quad 5 \quad 6 \\ \hline 7 \quad 2 \quad 1 \\ \hline 10 \end{array}$$

$$10)1010(10$$

$$\text{der} = 0 + 0 * 2^0 = 0$$

$n = 10$

$\text{bit} = 1$

$$\text{der} = 0 + 1 * 2^1 = 2$$

$n = 10$

$\text{bit} = 0$

$$\text{der} = 2 + 0 * 2^0 = 2$$

$n = 1$

$\text{bit} = 1$

$$\begin{aligned} \text{der} &= 2 + 1 * 2^3 = 8 + 2 \\ &= 10 \end{aligned}$$
